

CLR Connection Center
West Capital Lending

VALUE PROPOSITION · APRIL 2026

Why CLR Connection Center?

The platform that transforms how West Capital Lending manages lead distribution and team performance.

PREPARED FOR
West Capital Lending — CLR Leadership

DATE
April 2026

CHAPTER 01 · THE PROBLEM —

Before CLR Connection Center.

West Capital Lending's CLR team was running one of the most revenue-critical operations in the company — but doing it with tools that simply couldn't keep up.

- **No centralized system**
CLRs had no single place to see which Loan Officers to call leads to.
- **Manual, inconsistent LO assignment**
Choices were made from memory or personal preference — not data.
- **Zero LO visibility**
No view of availability, workload, or recent performance.
- **Appointments in the wild**
Tracked in ad-hoc spreadsheets, or not tracked at all.
- **EOD reporting was skipped**
End-of-day summaries were inconsistent or missing entirely.
- **Team stats were invisible**
No one knew who was performing — top or bottom.
- **Compliance gaps**
NMLS checks were manual and frequently missed.
- **No CLR communication channel**
No shared space for questions, handoffs, or announcements.

The bottom line:

Missed opportunities = lost revenue, every single day.

CHAPTER 02 · THE SOLUTION —

Meet CLR Connection Center.

A purpose-built platform that takes daily LO distribution from a guessing game to a transparent, data-driven process — while locking in fairness, compliance, and accountability across the entire CLR team.

THE CORE

Intelligent Daily LO Assignment Engine

Each morning the engine generates a single, availability-aware assignment list — every CLR sees the same, fair distribution, locked for the day.

Availability-aware

Morning / Afternoon

Locked Daily

Admin Override

How the weighted algorithm decides:

30%

Days Since Last Worked

25%

Call Frequency

20%

Availability

10%

Recent Boosts

10%

90-Day Transfer Volume

5%

Priority Tier

One generation per day. Locked.

Admin overrides are tracked in a full audit trail — every change, every reason, every signature.

CHAPTER 03 · CAPABILITIES —

Eight features. One platform.

Everything a CLR team needs to run a fair, fast, and compliant desk — in a single workspace that lives on every device.

01 Smart LO Assignment

Algorithm-driven daily list generation keeps rotation fair and transparent.

02 Appointment Tracking

Full lifecycle from scheduled to transferred or fell-through — nothing slips.

03 Team Stats

Real-time leaderboard surfaces CLR performance across key metrics.

04 EOD Reporting

Structured daily summaries delivered automatically via email.

05 NMLS Compliance Checks

Automated reminders every two months — regulatory hygiene, built in.

06 Team Chat

Real-time communication channel shared by every CLR on the floor.

07 State Licensing

Instant visibility into each LO's state license footprint.

08 PWA Installable

Installs as a mobile or desktop app — the platform goes where the team goes.

CHAPTER 04 · UNDER THE HOOD

The algorithm, explained.

Every LO receives a daily score. The highest scores rise to the top of the assignment list. Here's how — and why — each factor is weighted the way it is.

30%	Days Since Last Worked Rewards LOs who haven't been fed leads recently — the #1 lever for fair rotation.	 weight
25%	Call Frequency Balances volume so no single LO is over- or under-served across the week.	 weight
20%	Availability Filters by morning, afternoon, or full-day availability before scoring.	 weight
10%	Recent Boosts Lets management temporarily elevate an LO without breaking the system.	 weight
10%	90-Day Transfer Volume Factors in each LO's actual closing performance over the last quarter.	 weight
5%	Priority Tier Reflects management-set tier (standard, priority, VIP) — a light touch, not a dominator.	 weight

TOTAL SCORE**Sum of weighted factors → Daily LO ranking**

Recomputed once per day at generation time. Locked after creation; admin overrides are audited.

CHAPTER 05 · THE SHIFT

Before vs. After.

A side-by-side look at the operational change CLR Connection Center delivers — from guesswork to a system that runs itself.

BEFORE · Without CLR CC**AFTER · With CLR CC**

- | | | |
|----------------------------|---|--|
| ✗ Manual LO selection | → | ✓ Algorithm-driven, fair rotation |
| ✗ Spreadsheet appointments | → | ✓ Tracked with status lifecycle |
| ✗ No team visibility | → | ✓ Real-time Team Stats dashboard |
| ✗ Ad-hoc EOD reports | → | ✓ Structured daily email reports |
| ✗ Missed NMLS checks | → | ✓ Automated bi-monthly reminders |
| ✗ No communication channel | → | ✓ Built-in Team Chat |
| ✗ Manual compliance | → | ✓ Audit trail + triple-confirm admin actions |

CHAPTER 06 · IMPACT

The business case.

Every feature was designed to remove friction from revenue-generating work. Here's where that translates into real dollars and a better-run desk.

**Faster lead distribution**

More calls made per day — the engine does the deciding.

**Fairer LO rotation**

Higher LO satisfaction and engagement across the book.

**Better appointment tracking**

Fewer dropped leads; every appointment has a known state.

**Consistent EOD reporting**

Management sees what happened, every day, without chasing.

**NMLS compliance**

Regulatory risk reduced through automation and reminders.

THE MATH

+1 transfer per CLR per week

Even a single additional transfer per CLR per week translates to a significant revenue impact at West Capital Lending's scale — and the platform is engineered to deliver many more than that.

CHAPTER 07 · WHO IT SERVES —

Built for every role on the floor.

One platform, four distinct views — each tuned to the work that role actually does.

CLRs

FRONTLINE

- Daily assignment list, always current
- Appointment tracking end-to-end
- Structured EOD reports
- Team Chat for real-time coordination

LO Management

OVERSIGHT

- Full visibility into the assignment algorithm
- Per-LO performance dashboards
- Boost & tier controls to shape rotation

Admins — Ethan Wood, Chris Redoble

CONTROL PLANE

- Full system control and configuration
- Audit logs for every override and change
- Triple-confirm controls for sensitive actions

All Users

SHARED

- Team Stats leaderboard
- NMLS compliance checks
- State licensing lookup

CHAPTER 08 · SECURITY & RELIABILITY —

Built to be trusted.

Sensitive lead data and production workflows demand more than good intentions. CLR Connection Center layers access control, confirmation friction, and a permanent audit trail on top of reliable infrastructure.

**Role-Based Access Control**

Three roles — CLR, Admin-CLR, Admin-only — each with scoped permissions.

**Triple-Confirm Admin Actions**

High-impact operations require triple confirmation + virtual signature.

**Daily Assignment Locking**

Once generated, the day's list is locked to prevent manipulation.

**Full Audit Log**

Every override and admin action is timestamped and permanently recorded.

**Railway + SQLite**

Hosted on Railway with a persistent SQLite database for reliable uptime.

**Email via Resend**

Notifications delivered through Resend from reports@wlc.it.com.

Designed for the desk that can't afford to miss.

Every safeguard — from triple-confirm actions to assignment locking — exists because a misstep in CLR operations has a direct revenue cost. The platform treats every override as a record, not a suggestion.

CHAPTER 09 · GETTING STARTED —

Ready when you are.

Access is live. New users are onboarded automatically — no ticket, no delay.

LOG IN

web-production-b6285.up.railway.app

OPEN PLATFORM →

Default admin: ethan.anthony.wood@gmail.com

Automatic Onboarding

New users receive a welcome email the moment their account is created — no manual setup required.

Built-In Help

Every page includes access to the Help section, complete with walkthrough videos and written manuals.

Purpose-Built for WCL

Designed and shipped specifically for West Capital Lending's CLR operations — not a generic SaaS.

A NOTE FROM THE BUILDERS

This platform was purpose-built for West Capital Lending by Chris Redoble & Ethan Wood.
